AutoCAD Activation Code is also capable of rendering PDF files, which has led to the use of AutoCAD for the document production of architectural plans and for the export of architectural plans for manufacturing. The last version of AutoCAD to include such functionality was AutoCAD 2009. Editions AutoCAD is currently available in several different editions and versions. All current editions of AutoCAD are based on the earlier Release-2007, except for AutoCAD LT, which is based on Release-2007r1. AutoCAD LT does not have the full features of AutoCAD including the ability to draw connected components, draw open-ends, insert components, etc. Other than that AutoCAD LT does include many of the same components available in AutoCAD. AutoCAD LT is not a complete implementation of AutoCAD. It is limited in the features it contains and is priced lower than AutoCAD. In addition, it does not have the same level of features available for use in production as AutoCAD. This means that users must use both AutoCAD and AutoCAD LT simultaneously to create a set of drawings. This also makes it more difficult to use AutoCAD LT as a server for distributing drawings. Autodesk charges different prices for different editions. AutoCAD LT costs less than AutoCAD. The difference in price is due to a reduction in the number of features available in the LT version compared to the standard AutoCAD version. AutoCAD Standard, Design, Architecture and Construction are based on the 2007 Release. AutoCAD Architectural is based on the 2007r2 release. AutoCAD Design & Construction and AutoCAD Civil are based on the 2008 Release. AutoCAD LT is based on the 2007 Release with limited features. AutoCAD LT Architecture is based on the 2007r1 release.
