Adobe's home page provides a list of Photoshop tutorials and training materials. Go to www.adobe.com/products/photoshop.html. ## Adobe Fireworks Adobe Fireworks is a drawing and illustration program with many of the same features as Photoshop, except that it enables layers instead of raster images. Fireworks uses vector graphics, which are geometric shapes and lines instead of pixels, and is particularly useful for creating logos, illustrations, and corporate identity designs. The most common user interface is to lay out on a design plane. Figure 9-1 shows a Fireworks layout. FIGURE 9-1: After you create your design layout, you can apply a style sheet to modify elements on it. Fireworks is often used in conjunction with other programs to create web graphics. You can find a list of tutorials and training materials at www.adobe.com/products/fireworks.html. ## After Effects After Effects is a motion-effects editing program that enables you to create various types of titles, animations, and motion graphics. The user interface is much different than that of most graphic programs because it uses a timeline of events to show you the progress of your project. A timeline is similar to a storyboard in traditional animation and is a series of frames that represent the time line of your project. After Effects also includes tools to manipulate and alter your footage. After Effects is used for both traditional animation and video editing. Adobe's website provides tutorials on After Effects at www.adobe.com/products/aftereffects.html. ## GraphicConverter GraphicConverter is a powerful image-manipulation program that offers many features not found in Photoshop, such as 3D modeling, video editing, and animation. The major drawback of this program is that it requires a lot of time to learn and can be an expensive program to purchase. If you plan to edit large files (such as video or 3D models), you're better off using Photoshop or another photo-editing software program. If you want to perform non-photographic tasks, such as creating a logo or advertising ad, you may want to use GraphicConverter. To find a list of tutorials and training materials, visit www.adobe.com/products/graphicconverter.html. ## CorelDRAW CorelDRAW, a graphics and illustration program,

This invention relates to an improved fuel dispenser in which a fuel supply line is provided with a check valve operable by vacuum in a negative feed mode, and to a method of making such a fuel dispenser. In a typical fuel dispenser, a consumer of the fuel either inserts a credit card into a card reader or may use a driver's license or other form of identification. In the case of a credit card, the credit card number is transmitted in a data transmission stream to a central computer which verifies the credit card number against a central computer database. If the credit card number is valid, the central computer authorizes a transaction for the purchase of the fuel. In order to complete the transaction, the central computer causes a dispensing valve to open and dispense the fuel through an outlet nozzle. In the past, many fuel dispensers have been based on electromechanical valve assemblies which include moving members such as a valve plate and a solenoid for moving the valve plate. The solenoid has a coil and a plunger which moves axially and pivotally relative to the coil. Typically, two spaced apart springs are disposed between a valve plate and a solenoid plunger. The springs are arranged to move the plunger as the solenoid coil is energized or de-energized. This, in turn, moves the valve plate in a positive or negative feed direction to dispense fuel or close the fuel supply line to the outlet nozzle. Over the years, fuel dispensers have been provided with the capability of dispensing fuel from a large storage tank. In a large capacity tank, rather than providing a fuel supply line with a fixed nozzle, the fuel is dispensed through a series of smaller nozzles. In this manner, the fuel is more effectively dispensed into a vehicle. Generally, rather than using an electromechanical valve assembly, a separate vacuum line is provided to apply vacuum to the fuel supply line and to the small nozzles. In the past, a fuel dispenser in which a vacuum line is provided with a fixed nozzle has been sold by the present assignee, SunFuel Corporation of Woodbury, N.Y. as product number SF 9800. Such a fuel dispenser uses a check valve which includes a combination of a ball and spring assembly. The ball and spring assembly has a valve ball which moves in a valve chamber and a return spring which holds the valve ball against the seat at the bottom of the valve chamber. A vacuum
